Response to Arguments

7. Applicant's arguments filed 6/30/04 have been fully considered but they are not persuasive.

Applicant argues that the capacitor in Stupeck et al. is not used to move the heads to a parked location during power loss but instead used to control logic (58) during the head retract operation. Examiner notes that claim 1 does not set forth any limitation that states that the charge reservoir is used as a power source for the positioning motor when there is a loss of power, but instead states that the charge reservoir provides power to the hard disk drive. Clearly the capacitor as taught by Stupeck et al. is providing power to the hard disk drive when there is a loss of power. Additionally, it is clear from the abstract "after power loss, is supplied with current from the capacitor" and column 8 lines 7-9 "Current is supplied to the positioner motor windings PW1, PW2 from the capacitor C1" that the capacitor is used in conjunction with the back EMF to move the heads to a parking location.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
